TITLE: Synthesis of esters from hexachlorocyclopentadiene

SOURCE: Azerbaydzhanskiy khimicheskiy zhurnal, no. 5, 1965, 27-32

TOPIC TAGS: aliphatic dicarboxylic acid, aliphatic alcohol, ester, chemical synthesis, condensation reaction, chlorinated organic compound

ABSTRACT: The paper gives the results of esterification of 1,4,5,6,7,7-hexachlorobicyclo-(2.2.1)-5-heptene-2,3-dicarboxylic anhydride with C<sub>4</sub>-C<sub>10</sub> aliphatic alcohols of normal and iso structure. Condensation of hexachlorocyclopentadiene with maleic anhydride showed that the optimum conditions for the synthesis of 1,4,5,6,7,7-hexachlorobicyclo-(2.2.1)-5-heptene-2,3-dicarboxylic anhydride are: a temperature of 170C, a 1:1 molar ratio of the components, a duration of the experiment of 3 hr, and one atmosphere of nitrogen. The yield of the addition product thus reaches 99.8%. The effect of various reaction parameters (temperature, molar ratio of the initial components, duration of experiment, amount of catalyst taken) in the esterification reaction of the dicarboxylic anhydride on the yield of esters was determined, and the optimum conditions for the preparation of diesters were established in each case. It was shown that as the chain length of the alcohol increases, the yield of diesters

Moscow, Izd-vo AN SSSR, 1960. 213 p. Errata slip inserted.  
2,000 copies printed.

Sponsoring Agency: Akademija nauk SSSR. Gidrokhimicheskiy institut  
(Novocherkassk).  
Editorial Board (title page): Resp. Ed. O. A. Alechin, N. V. Veselovskiy, Deputy Resp. Ed. V. G. Datsko, G. S. Konorilov, M. I. Kriventsov, P. I. Krylov, Resp. Secretary and K. Q. Lazarev, Ed. of Publishing House: D. N. Trifonov. Tech. Ed.: I. T. Dorokhina.

PURPOSE: This publication is intended for hydrologists, hydrochemists, and hydrometeorologists.

COVERAGE: This is a collection of 22 articles on the hydrochemistry of rivers and water bodies in the USSR. The authors discuss pollution, spectrographic methods of determining the content of microelements in water, and the content and discharge of ions, gases, as well as chemical, biological and organic substances.

A map showing the distribution of theionic discharge of rivers in the USSR is the most complete to appear in print to date. No personalities are mentioned. Each article is accompanied by references.

*Effect of nitrogen and phosphorus application in various proportions on the content of various forms of phosphorus compounds in the plant. N. I. Guseynov, M. I. Pleshchinskaya, A. Yu. Naub, Izv. Akad. Nauk. Arzrabsdzh. S.S.R. 1953, No. 3, 61-72; Reprint. Zhur. Khim. 1954, No. 10, 520. Yield's ability with corn, P was added in quantities of 0.1 g./kg. as superphosphate/kg. of soil and N in quantities of 0.1 g. as  $(NH_4)_2SO_4$ . Applying the superphosphate before sowing caused a noticeable increase in the P-content, comigrating in the plant. Supplying the superphosphate at a later than (when sowing) caused a lowering in the content of all P-organic compds. Accumulation of various forms of P in the plant depended on the mode of N feeding. A higher content of P-organic compounds was obtained when both N and P were added during vegetation. Simultaneous application of N and P increased the total and proteinaceous N content. On application of the entire amt. of N and P before sowing, the total N in the plant was 3.02% and the protein N 16.42%. On application of part of N and P during vegetation, the total N increased to 3.45-3.6% and the protein N to 16.20-16.71%. Thus, the application of N and P during various stages and in various proportions affected the metabolism of the plant, and the yield.*

7, 83-95.

Abstract: In the Azerbaydzhan SSR, the effect was studied of the oil-refinery waste gumbrin [sic], separately and in mixture with mineral fertilizers, on the yield of the cotton plant on grey-desert-meadow soils and on the yield of cabbage on stiff soil. In the 17.5 c/ha. yield of cotton-wool without fertilization, NP gave an increase of 4.2 c/ha.,

Title : Stubble Crops in the Kuba-Khachmasskaya and Nukha-Zakatal'skaya Zones.

Orig Pub: Sots. s.kh. Azerbaydzhana, 1957, No 5, 22-25

Abstract: On the basis of experimental data of the zonal stations of Azerbaydzhhan Institute of Agriculture, it was demonstrated that in the conditions of Nukha-Zakatal'skaya and Kuba-Khachmasskaya zones, the stubble crop of corn produces a yield of 201-337 centners/ha

of green roughage, 296-676 centners/ha of silage (together with the ears) and 54.6-59.3 centners/ha of grain. Millet produces 15.5-22.7 centners/ha of grain; sunflower - 323-470 centners/ha of silage mass and 23.8 centners/ha of grain; table beets - tops 41-151 and roots 194.9-361 centners/ha; table carrots - tops 312 and roots 144.4 centners/ha. In Kuba-Khachmasskaya irrigated zone, there are possibilities of growing even three crops, the first two for grain (winter crops, millet) and the third for green roughage. The stubble sowings contribute to clear-

Abstract: The Mountain cattle of Dagestan are characterized by a low milk yield, but by a comparatively high content of fat in the milk, and by a good adaptation to mountain conditions. The cattle bred in the valleys was improved to some extent by crossing with "Krasnostepnaya", "Seroukrainskaya", "Simmental'skaya",

Abstract: "Astrakhanskaya", and other breeds. The aim was to combine the high milk productivity, the large live weight, the higher fat content in the milk, and the adaptation to the mountain conditions, by crossing Schwyz bulls (basically crossbreeds of the 2nd and 3rd generation), with mountain cows. For this purpose crossbred animals possessing a strong constitution, well developed but without huge framework, strong hooves, and compact-formed, were used. The cows of the new breed - "Dagestanskaya buraya" - have an average weight of 387 kilograms (mountain cows - 196 kilograms). They attain their maximal live weight at about 6 years of age (mountain cows - at 9-10 years); their milk yield is almost 3 times higher than that of mountain cows (1,952 kilograms of milk with fat content of 3.99 percent as compared

TITLE: Investigation of the effect of an electric field on the mechanical strength of polystyrene film

SOURCE: Mekhanika polimerov, no. 6, 1965, 78-84

TOPIC TAGS: polystyrene, ~~photopolymer~~, electric field, electric effect, solid mechanical property, plastic strength, tensile strength, mechanical stress

ABSTRACT: An investigation of the effect of an electric field on the time dependence of the mechanical strength of a polystyrene film under different values of voltage and duration revealed a decrease of the strength of polystyrene film as a function of the electric field followed by a gradual increase in the film strength. It was also established that the activation energy of the process of mechanical failure subjected to an electric field underwent no changes and that alterations of the strength properties were due to changes in the structure-sensitive coefficient. Orig. art. has: 5 figures, 4 formulas, and 1 table. [Based on author's abstract]

EXPANSION OF COMMUNICATIONS FACILITIES IN AZERBAIJZHAN SSR IN 1956

EXPANSION OF COMMUNICATIONS FACILITIES IN AZERBAIJZHAN SSR IN 1956 -- Baku, Main City Party Office, 12 Feb 57.

Communications facilities in the Azerbaijan SSR were expanded during 1956. The Baku Television Center went into operation. Additional high-frequency telephone channels were put into operation. In Baku alone, 3,500 telephones were installed. New telephone exchanges were built in five rayons of the republic. A total of 64 new and rebuilt wired radio centers were put into operation, including 34 large ones. Over 36,000 wired radio speakers were installed in cities and villages. A great deal of work was done to improve postal communications. -- T. K. Guseynov, Minister of Communications Azerbaijan SSR

3316. The determination of antimony by permanganate titration. A. A. Mamutov and N. G. Guseynov. Trudy Akad. SSSR, Tsvet. 1955, 8, 157-164; Ref. Zhur., Khim., 1956, Abstr. No. 1032.

The permanganate method for the determination of Sb is unsuitable when the titration is accompanied by the ptn. of antimonic acid or the release of free Cl. Conditions for the determination of Sb by permanganate have been evolved, whereby neither of these reactions takes place; at the end-point the characteristic pale-pink colour appears. A method has been developed for the determination by permanganate of Sb<sup>+++</sup> in antimony preparations.

TITLE: The problem of peculiarities of the magnetic properties of some compounds of manganese with elements of the nitrogen subgroup

PERIODICAL: Referativnyy zhurnal. Khimiya, no. 19, 1961, 20, abstract 19B141 (Izv. AN AzerbSSR. Ser. fiz.-matem. i tekhn. n., no. 4, 1960, 85-96)

TEXT: From an analysis of experimental data on the crystal structure and magnetic properties of the compounds MnX, where X = P (I), As (II), Sb (III), and Bi (IV), it is concluded that I-IV belong to the class of ferromagnetics, and not to that of ferrimagnetics. The spontaneous magnetization intensity of I is probably due to the non-collinear (i.e., non-parallel or anti-parallel) arrangement of magnetic moments of the sublattices of this compound. It is assumed that the non-collinearity of magnetic moments at low temperatures results in strong susceptibility and in a pronounced

The problem of peculiarities of the...

I. In addition, the temperature dependence of the spontaneous magnetization intensity is assumed to obey the " $T^2$  law", and not the " $T^{3/2}$  law" as in the case of ordinary ferromagnetics. It is further believed that the magnetic resonance absorption also has a very peculiar nature and that the magnetic moments of Mn ions are located in the (001) plane below the Curie point and deviate from the [100] or [010] axis by an angle of approximately  $17.5^\circ$ . TITLE: Magnetic Resonance in Rhombohedral Weak Ferromagnetics

PERIODICAL: Zhurnal eksperimental'noy i teoreticheskoy fiziki, 1960,  
Vol. 38, No. 4, pp. 1326 - 1331

TEXT: The authors use the conceptions of the nature of weak ferromagnetism explained by I. Ye. Dzyaloshinskiy in Ref. 1 and the Hamiltonian given by him for investigating the conditions for magnetic resonance in weak ferromagnetics. As examples, the authors deal with weakly ferromagnetic rhombohedral crystals of the types of  $\alpha\text{-Fe}_2\text{O}_3$  and  $\text{MnCO}_3$ , because it is on these that the most experimental data are available. In

the present paper it is shown that by using Dzyaloshinskiy's conceptions of weak ferromagnetism, a far more natural explanation of the observed resonance properties of hematite can be given than that which, e.g., Kumagai et al. (who carried out a very complete experimental investigation of resonance on hematite), Shimizu and others succeeded in giving.
